### Apple ispravio bag sa praćenjem

*Nakon nekoliko sudskih tužbi, ali i mnoštva osuda, Apple je tokom jučerašnjeg dana ponudio korisnicima novu verziju iOS-a, u kojoj se rešava problem praćenja.*

 **iOS 4.3.3 Software Update**

**About iOS 4.3.3 Software Update**

This update contains changes to the iOS crowd-sourced location database cache including:

- Reduces the size of the cache
- No longer backs the cache up to iTunes
- Deletes the cache entirely when Location Services is turned off

Version: 4.3.3  
Post Date: May 04, 2011  
Download ID: DL1358

**System Requirements**

- Mac or PC computer with USB 2.0 port
- iTunes 10.1 or later (10.2 recommended)

**Products compatible with this software update:**

- iPhone 4 (GSM model)
- iPhone 3GS
- iPad
- iPod touch (4th generation)
- iPod touch (3rd generation)

**Verzija iOS 4.3.3** pomenuti problem rešava na tri nivoa - ne sinhronizuje se na iTunesom, čuvaju se podaci o lokacijama samo za poslednjih sedam dana, a oni koji to žele mogu u potpunosti da isključe *Location Services*.

Updejt je dostupan korisnicima iPhonea i iPod Toucha treće generacije i novijim, kao i za obe generacije iPada.

Što se podataka o lokacijama koji su ranije zabeleženi tiče, Apple kaže da se nije radilo o lokacijama korisnika, već hotspotova koji se nalaze u blizini.

U svom prvom reagovanju na otkriveni problem, iz ove kompanije su rekli da ne prate korisnike, da to nikada nisu i neće raditi.
